- 1 x Analog Logic Input

\$299^{+ GST}
RRP

The Control Core is the affordable answer to getting all your devices onto the CommBox Control Central cloud, enabling centralised monitoring and management, from anywhere in the world.

The Control Core is just as powerful as it's older siblings, the Pro 2 and Lite 2, with just a few less ports than the Lite 2. It features the same powerful web interface and Control Editor, access to our vast library of device drivers, and introduces PoE in addition to the standard 12V power adapter.

It will integrate with our range of Control Panels and Joey, or any web browser on any device you have. Attach one to a CommBox Interactive Classic V3, and control the touchscreen, CommBox Motorised Stand and CommBox Premium Sound Bar. You can even control it directly on the screen through the built-in web browser.
